

UKLPG – a quick guide to our website.

Future CPD activities – information on future meetings including programme and links for registration. Our annual cycle of meetings includes – liver pathology update – topical areas, reports from international meetings, and the year’s EQA circulations with discussion of diagnoses and ‘masterclass’ presentations. Also an annual course on medical liver biopsy interpretation organised by the Royal College of Pathologists, and associated slide based workshop.

Previous CPD archive – this is the area for finding CPD in liver pathology. It includes presentations from previous meetings listed above since 2006 – as powerpoints and some videos (update meetings from 2016). Click [here](#) for a list of topics. Also historic audiovisual seminars by the late Professor Peter Scheuer, which broadly match the chapters in ‘Scheuer’s Liver Biopsy Interpretation’ – now in the 9th edition, by Jay Lefkowitz. We are developing on line lectures for trainees and students. There are links to some recent lectures from other meetings (e.g. Path Soc/BDIAP). Also a set of educational cases for trainees preparing for FRCPath, based on previous EQA cases.

UK Liver Pathology EQA Scheme – all the information about current and previous circulations since 2003. This site includes admin arrangements for new members and submitting cases. We also now accept responses from trainees and some overseas members (previously worked in the UK) – for whom this is entirely an educational activity and does not qualify as EQA.

UKLPG – background and committee meetings – the constitution of the UKLPG and minutes of meetings.

UKLPG – membership and how to join.

UKLPG – subcommittees – minutes of meetings.

Reference images for liver biopsy reporting – sets of photographs for steatosis and fibrosis – to help ‘benchmark’ these subjective assessments.

Liver transplant pathology – information about transplant pathology, includes archive of previous meetings.

Paediatric section – information about paediatric hepatopathology.

Other professional documents – includes links to RCPATH tissue pathways and liver dataset, subspecialty advisor annual reports to RCPATH, a survey of UK Liver Pathology in 2008 and some archived old minutes.
